# Executive Summary

---

The Stanley Municipal Airport is planning to develop a crosswind runway project on the airfield located at the southwest edge of Stanley, North Dakota. The project area comprises approximately 210-acres and consists of the adjacent agricultural fields surrounding the existing Stanley Municipal Airport footprint. The project is located southwest of the city of Stanley in the south half of Section 29, southwest quarter of Section 28, northwest quarter of Section 33, Township 156 North, Range 71 West and of Mountrail County, North Dakota. Please refer to Figure 1, Project Location Map.

A Level 2 aquatic resource delineation was conducted in accordance with the 1987 Corps of Engineers Wetlands Delineation Manual, and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Great Plains Region (Version 2.0). Wetland boundaries within the project area were determined by completing United States Army Corps of Engineers (USACE) Wetland Determination Data Forms for paired test hole points and observing soils, vegetation, and hydrology in the area. For any other aquatic resource delineations, USACE Regulatory Guidance Letter 05-05 was used in conjunction with the USACE Other Water form.

The field aquatic resource delineation for the proposed project was completed by Greg Meyer (Environmental Scientist) of Moore Engineering, Inc., and Hal Weiser (Professional Soil Classifier) on July 13, 2023. Numerous aquatic resources are located in the project area including several wetlands scattered throughout along the edge of the project area. Cumulatively the wetlands comprise approximately 19.12 acres. The project area comprises approximately 210 acres. Please refer to Figure 2, Delineated Aquatic Features.

Cowardin classification included:

- Palustrine, emergent, persistent, temporarily flooded (PEM1A)
- Palustrine, emergent, persistent, seasonally flooded (PEM1C)

## 1. Introduction and Project Location

The Stanley Municipal Airport is planning to develop a crosswind runway project on the airfield located at the southwest edge of Stanley, North Dakota. The project area comprises approximately 210-acres and consists of the adjacent agricultural fields surrounding the existing Stanley Municipal Airport footprint. The project is located southwest of the city of Stanley in the south half of Section 29, southwest quarter of Section 28, northwest quarter of Section 33, Township 156 North, Range 71 West and of Mountrail County, North Dakota. Please refer to Figure 1, Project Location Map.

The decimal degree coordinates for the center of the project area are 48.301998° N, -102.407615° W. The Airport is located on private land near Stanley, North Dakota. Should the USACE need to contact the applicant or visit the project visit, please contact Mr. Evan Barrett, 952-641-8820, [Evan.Barrett@meadhunt.com](mailto:Evan.Barrett@meadhunt.com).

The field aquatic resource delineation for the proposed project was completed by Greg Meyer (Environmental Scientist) of Moore Engineering, Inc., and Hal Weiser (Professional Soil Classifier) on July 13, 2023.

## 2. Methods

Moore Engineering reviewed U.S. Geological Survey (USGS) topographic maps (Figure 3), U.S. Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS) soil survey data (Figure 4), and U.S. Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) (Figure 5) for the project area prior to performing the aquatic resource field delineation.

### 2.1 Field Aquatic Resource Delineation

A Level 2 delineation was completed in accordance with the 1987 Corps of Engineers Wetlands Delineation Manual, and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Great Plains Region (Version 2.0). The presence and extent of areas meeting wetland criteria within the study area were determined by completing USACE Wetland Determination Data Forms for paired test hole points and observing vegetation and hydrology in the area. For any other aquatic resource delineations, the USACE Regulatory Guidance Letter (RGL, No. 05-05), Ordinary High Water Mark Identification, was utilized. Potential wetland areas and other waters were examined in the entire project area according to guidelines set forth in these documents and wetland boundaries were determined through analysis of the vegetation, soils, and hydrology.

Plant species throughout the project area and at each wetland and upland test hole were identified and assigned a wetland indicator status according to the National Wetland Plant List, version 3.5 (USACE 2020). On the enclosed data forms, the plant indicator status follows the plant's scientific name unless a status has not been assigned.

According to the 1987 Manual and "Regional Supplement" cited above, the hydrophytic plant criteria are met when more than 50% of the dominant species within all vegetative strata are assigned an obligate (OBL), facultative wet (FACW), or facultative (FAC) wetland status. The wetland indicator status is provided to show the wetland affinity for each plant.

Hydric soil properties described follow Field Indicators of Hydric Soils in the United States (USDA-

NRCS 2018). Soils were examined and characterized by digging soil pits at sample points along designated transects. If the soils exhibited indicators of hydric soils per the “Field Indicators” manual cited above, they were determined to be hydric. Soil colors described herein follow Munsell Soil Color Charts.

The presence of wetland hydrology was determined through direct observation of primary and/or secondary wetland hydrology indicators. The presence of a single primary indicator such as surface water is sufficient to conclude that the wetland hydrology parameter is met. The direct observation of two or more secondary wetland hydrology indicators such as surface soil cracks or geomorphic position is required to conclude that the wetland hydrology criteria is met. Wetlands and other waters were mapped with a sub-meter accurate handheld GPS unit (Trimble R1 GNSS receiver and tablet, or similar device). USACE wetland data sheets are provided in Appendix D.

For the purposes of this delineation, areas that met wetland criteria (hydrophytic vegetation, hydric soils, wetland hydrology indicators) are identified as “Wetland”.

## 2.2 Antecedent Precipitation Analysis

Analysis of 90-day antecedent precipitation conditions for each year of imagery was conducted using the USACE Antecedent Precipitation Tool (APT). The APT identifies all weather stations that are located within a 30-mile radius from the point of interest using NOAA’s Daily Global Historical Climatology Network (GHCN-Daily), which integrates climate data from over 20 sources. Each weather station is then ranked based on a weighted difference value which incorporates both the distance to the point of interest and the difference in elevation. The weather station with the lowest weighted difference value, as well as a record that is sufficient to develop the 30-year normal period and the antecedent period, is selected by the tool as the Primary Station used to develop the dataset.

The APT determines whether antecedent precipitation is normal by comparing rainfall data from the previous three months to the same three-month period over a rolling 30-year record. This method is different than the calculation of normal precipitation in the Natural Resources Conservation Service WETS tables, which use the 30-year climate normal that are maintained by NOAA and adjusted every decade.

## 3. Existing Conditions

The Airport project area comprises approximately 210-acres and consists of the adjacent agricultural fields surrounding the existing Stanley Municipal Airport. A variety of annual crops are grown in the agricultural fields including flax, wheat, and soybeans. An alfalfa hayfield is also present in the project area. Numerous depression wetlands are scattered throughout the project area. Site Photos are included in Appendix A and scientific names of the above-mentioned plants are included in Appendix B, Plant List.

The project area is located within the Northwestern Glaciated Plains ecoregion. The Northwestern Glaciated Plains ecoregion is characterized by a youthful morainal landscape with significant surface irregularity and high concentrations of wetlands (Ecoregions of North Dakota and South Dakota, Bryce et al. 2018). Historically, the project area appears to have functioned similarly as it does today.

The National Wetland Inventory (NWI) identified numerous features within the project area. These features consisted of ten palustrine, emergent, persistent, temporarily flooded (PEM1A) basins, nine

palustrine, emergent, temporarily flooded, drained (PEMAd) basins, one palustrine, emergent, persistent, seasonally flooded, excavated (PEM1Cx) feature and one a palustrine, emergent, persistent, seasonally flooded, (PEM1C) basin. The project area is located within USGS topographical quadrangle, Stanley (4810245). The topographical map depicts some depressional areas but no aquatic features, within the project area (Figure 3). The project area is within the Lake Sakakawea (10110101) HUC8 watershed (NDDEQ 2023).

Lake Sakakawea (Missouri River), the nearest Traditional Navigable Water (TNW) to the project area, is located approximately 30 miles to the southwest at its nearest point (NDSWC 2015). The Stanley Municipal Airport is located above and approximately one-half mile from the Stanley Dam (Little Knife River). The Little Knife River is a direct tributary to Lake Sakakawea (Missouri River). Precipitation over the past few months was considered drier than normal at the project area (USACE APT 2023).

#### 4. Results

Moore reviewed typical desktop resources such as Soil Survey, NWI, and topographic data prior to the project visit.

##### 4.1 Desktop General Information Review

##### Soil Survey (Figure 4)

2023 SSURGO soil map unit data indicates the project is underlain by 14 different soil map units, summarized in Table 2 below.

Table 1: Summary of Mapped Soils Within the Project Area

Map Unit Symbol	Mapunit Name	Hydric Rating (%)	Percentage of Project Area
C3A	Parnell silty clay loam, 0 to 1 percent slopes	100	3.30
C132B	Williams-Zahl loams, 3 to 6 percent slopes	2	35.30
C153E	Zahl-Max loams, 15 to 25 percent slopes	8	0.10
C154C	Zahl-Williams-Bowbells loams, 3 to 9 percent slopes	2	14.30
C210A	Williams-Bowbells loams, 0 to 3 percent slopes	3	3.60
C272A	Hamerly-Tonka complex, 0 to 3 percent slopes	41	3.90
C360B	Livona fine sandy loam, 0 to 6 percent slopes	3	5.10
C370B	Krem-Lihen loamy fine sands, 0 to 6 percent slopes	2	2.00
C415A	Tansem loam, 0 to 2 percent slopes	1	1.20
C424A	Minot silty clay, 0 to 2 percent slopes	2	2.70
C800B	Appam sandy loam, 2 to 6 percent slopes	1	18.00
C825A	Divide loam, 0 to 2 percent slopes	10	2.30
C870E	Wabek-Lehr-Appam complex, 9 to 25 percent slopes	2	5.50
C874C	Wabek-Appam complex, 6 to 9 percent slopes	1	2.80

##### National Wetland Inventory (Figure 5)

The National Wetland Inventory (NWI) identified numerous features within the project area. These features consisted of ten palustrine, emergent, persistent, temporarily flooded (PEM1A) basins,

nine palustrine, emergent, temporarily flooded, drained (PEMAd) basins, one palustrine, emergent, persistent, seasonally flooded, excavated (PEM1Cx) feature and one a palustrine, emergent, persistent, seasonally flooded, (PEM1C) basin.

### Precipitation (Appendix C)

According to the APT analysis, the project experienced below normal precipitation conditions in the 90 days prior to the field delineation and identified as mild drought condition.

#### 4.2 Field Investigation

The field delineation conducted July 13, 2023, identified and delineated seven aquatic resources (wetlands) (Figure 2). Aquatic resources are shown in Table 2, described below, and shown on Figure 2. Photographs of the project area are provided in Appendix A, USACE Wetland Determination Field Data Sheets are provided in Appendix D, and the OHWM Data Sheet is provided in Appendix E.

Table 2: Delineated Aquatic Resources

Test Hole	Feature ID	Classification	Latitude N	Longitude W	Acres
1	Wetland 1	PEM1A	48.302914	-102.398627	0.86
3	Wetland 2	PEM1C	48.304603	-102.402587	15.66
5	Wetland 3	PEM1C	48.306672	-102.415221	1.58
7	Wetland 4	PEM1A	48.306667	-102.413264	0.33
9	Wetland 5	PEM1A	48.306728	-102.411851	0.03
11	Wetland 6	PEM1C	48.298550	-102.408171	0.60
13	Wetland 7	PEM1C	48.298715	-102.415358	0.09

#### Wetlands 1, 4, and 5

Wetlands 1, 4, and 5 consist of shallow depressions with temporary hydrologic regimes. Wetland 1 is located along the eastern boundary of the project area and Wetlands 4 and 5 are located along the northern edge. The wetland areas were not cropped in 2023 due to wet spring conditions. The wetlands are natural depression wetlands that meet the classification of PEM1A due to palustrine emergent, persistent, and their temporary flooded hydrologic regimes.

#### Vegetation

The vegetation community within Wetlands 1, 4, and 5 consists of common spikerush, foxtail barley, curly dock, and pinkweed. Common mallow was prevalent in Wetland 4 as it is able to grow upon the bare soils of the wetland interior.

The upland areas surrounding the wetlands were planted into agricultural crops of flax and soybeans.

#### Soils

Soils within the wetland area contain approximately seven inches of 10YR 2/1 silt loams over a reduced matrix of 10YR 3/2 and 4/2 with prominent redoximorphic concentrations. The observed

hydric soil indicator was Redox Dark Surface (D6) and Depleted Below Dark Surface (A11).

The upland data point profiles featured a layer of 10YR 2/1 loam over a dark subsoil (10YR 3/1 or 10YR 3/2) without redoximorphic features.

#### Hydrology

Each wetland basin was dry at the time of the field delineation. It is probable that each basin was wet in the spring as none had been planted. Observed secondary hydrology indicators included FAC-neutral Test (D5) and Geomorphic Position (D2). No water table or saturation was noted in the upper portion of the soil profile.

#### **Wetlands 2 and 3**

Wetlands 2 and 3 consist of depressions with seasonal hydrologic regimes. Both wetlands are located along the northern edge of the project area. The wetland areas were not cropped in 2023 and appear to be infrequently cropped except along their upper wetland boundaries. The wetlands are natural depression wetlands that meet the classification of PEM1C due to palustrine emergent, persistent, and their seasonally flooded hydrologic regimes.

#### Vegetation

The vegetation community within Wetlands 2 and 3 consists of common spikerush, foxtail barley, northern water plantain, and pinkweed along their boundaries. Reed canary grass and narrow-leaf cattail were noted in the interior of the wetland areas.

The upland areas surrounding the wetlands were planted to agricultural crops of flax and soybeans.

#### Soils

Soils within the wetland area contain approximately seven inches of 10YR 2/1 silt loams over a reduced matrix of 10YR 3/2 and 4/2 with prominent redoximorphic concentrations. The observed hydric soil indicator was Redox Dark Surface (D6).

The upland data point profiles featured a layer of 10YR 2/1 loam over a dark subsoil (10YR 3/1 or 10YR 3/2) without redoximorphic features.

#### Hydrology

Each wetland basin contained surface water (A1) at the time of the field delineation within their interior. Saturation (A3) was present to the surface near to the observation points. Observed secondary hydrology indicators included FAC-neutral Test (D5) and Geomorphic Position (D2). No water table or saturation was noted in the upper portion of the soil profile.

#### **Wetlands 6 and 7**

Wetlands 6 and 7 consist of depressional areas with seasonal hydrologic regimes that may be influenced by the adjacent roadways. Both wetlands are located along the southern edge of the project area adjacent to the northern right-of-way of 61<sup>st</sup> Street. Both wetland areas extend out of the project area and into the adjacent roadway. The wetlands meet the classification of PEM1C due to palustrine emergent, persistent, and their seasonally flooded hydrologic regimes.

#### Vegetation

The vegetation community within Wetlands 6 and 7 consists of common spikerush, foxtail barley, and reed canary grass along their boundaries. Prairie bulrush and narrow-leaf cattail were noted in

the interior of the wetland areas.

The upland areas surrounding the wetlands consisted of tame grasses such as quackgrass and Mexican fireweed. Wheat had been planted into the adjacent agricultural field above the wetland areas.

### Soils

Soils within the wetland area contain approximately seven inches of 10YR 2/1 silt loams over a reduced matrix of 10YR 3/2 and 4/2 with prominent redoximorphic concentrations. The observed hydric soil indicator was Redox Dark Surface (D6).

The upland data point profiles featured a layer of 10YR 2/1 loam over a dark subsoil (10YR 3/2 or 10YR 4/2) without redoximorphic features.

### Hydrology

Each wetland area was dry at the time of the field delineation within their interior but did contain an Algal Mat or Crust (B4). Observed secondary hydrology indicators included FAC-neutral Test (D5) and Geomorphic Position (D2). No water table or saturation was noted in the upper portion of the soil profile.

Numerous shallow depressions or swales were erroneously identified by the NWI as wetland areas. Some of these areas appeared to have either hydrophytic vegetation or indications of hydrology but lacked hydric soils. Detailed descriptions of these areas can be found in the observation points (50-60). Additional NWI locations were evaluated but proved to lack hydrology and these were identified as “nh” (no hydrology). These areas either lacked proper landscape position and landform (swales) or hydrology had been previously drained away from the area.

Project photographs are provided in Appendix A.

## **5. Interstate or Foreign Commerce**

None of the identified aquatic resources appear to support any type of interstate or foreign commerce for the purposes of recreation relating to sporting or leisure activities associated with interstate or foreign travelers, or industries engaged in interstate or foreign commerce relating to the production or sale of products and services.

## **6. Summary**

Seven wetlands were identified within the Project Area and comprise approximately 19.12 acres. Wetlands 1-5 are depressional and do not have surface outlets or connections with other aquatic resources. Wetlands 6 and 7 may have been influenced by the adjacent roadway. Each of these wetlands extend out of the project area and into the adjacent ROW.

## 8. Delineator's Credentials

### Greg Meyer, Environmental Scientist

Education: Concordia College – BA Biology  
University of North Dakota – MS Biology

Professional Membership: North Dakota Chapter of the Wildlife Society

Training: Hydric Soils and Wetlands Certification - NRCS  
Hydrogeomorphic Assessment of Wetlands - NRCS  
Wetland Delineator Certification Program  
Wetland Delineation Workshop - NDDOT  
Wetland Delineation Certification: Professionally Certified Wetland Delineator – MN #1177

### Hal Weiser, Professional Soil Classifier

Education: North Dakota State University – BS Soil Science  
– MS Soil Sciences

Professional Membership: North Dakota Registered Professional Soil Classifier - #53

Training: Hydric Soils and Wetlands Certification - NRCS  
Hydrogeomorphic Assessment of Wetlands – NRCS  
Hydric Soils and Advanced Hydric Soils – NRCS  
Prairie Pothole Wetland Hydrogeomorphic Model for Functional Assessment – NRCS  
NRCS Wetland Delineation and Certification (Instructor) – NRCS  
Rangeland Health Assessment (Instructor) – NRCS  
Conservation Planning (Instructor) – NRCS  
Cropland Soil Health Assessment (Instructor) – NRCS  
Ecological Site Identification (Instructor) – NRCS  
Wetland Reg. IV Delineation - USACE

## Project Photos

Photo #:4222  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: Northwest  
Notes: View of NWI designated area.  
No wetland is located at this location.  
Soybeans are growing in this  
agriculture field located to the north  
of the Stanley Municipal Airport.

Photo #:4223  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: North  
Notes: View of Wetland 1. Wetland 1  
is a shallow depression wetland. Curly  
dock, foxtail barley, and common  
spikerush were present in the wetland  
area.

Photo #:4224  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: West  
Notes: View of Wetland 2. Wetland 2 is a large sprawling depression located north of the Stanley Municipal Airport. Cattails and reed canary grass are present in the interior of the wetland while foxtail barley is prevalent along the wetland's edge. Portions of the wetland were cropped in 2022 but weren't planted in 2023.

Photo #:4225  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: South  
Notes: View of alfalfa field located north of Stanley Municipal Airport. NWI indicates a wetland at this location but no wetland exists here.

Photo #:4227  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: Southeast  
Notes: View of NWI location. No wetland is located at this location as it was erroneously identified or has been effectively drained for agricultural production.

Photo #:4229  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: Northeast  
Notes: View of depressional area that appears to be a wetland area but does not contain hydric soils. Observation point 52 was completed at this location. Hydrology flows slowly to the east and out of this location and the wet spring kept it from being planted in 2023.

Photo #:4230  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: Southeast  
Notes: View of depression area that was evaluated and determined to not be a wetland (background of photograph). Observation point 54 was completed in the shallow depression in the background of the photograph.

Photo #:4232  
Observer: GWM  
Date:7/14/2023  
Direction Photo is Taken: Southeast  
Notes: View of Wetland 3. Wetland 3 is a depression wetland with a classification of PEM1C. The wetland was not planted in spring of 2023 and appears to be infrequently cropped. Cattails and northern water plantain grow across the nearly dry basin.

Photo #:4234  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: North  
Notes: View of shallow swale that contained an erroneous NWI designation. Observation point 58 was evaluated at this location and it contained non-hydric soils. High concentrations of salinity caused the poor growing conditions at this site.

Photo #:4235  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: East  
Notes: View of Wetland 5 located just east of Wetland 4. Wetland 4 is a shallow depression wetland that was dry at the time of the field delineation. Common mallow was able to grow on the dried soils in the basin due to the dry conditions.

Photo #:4236  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: South  
Notes: View of Wetland 5. Wetland 5 is a shallow depression that wasn't planted in the spring of 2023 due to the wet conditions. Barnyard grass was prevalent in the wetland area.

Photo #:4242  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: East  
Notes: View of Wetland 6 that is located at the southern edge of the project area adjacent to 61<sup>st</sup> Street. Narrow leaf cattails, salt-marsh club rush, foxtail barley, and curly dock are present in the wetland area.

Photo #:4244  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: Northeast  
Notes: View of unplanted area located along southern edge of the project area. Observation point 60 was completed at this location. Non-hydric sodium-affected soils cause this area to be unproductive cropland. Foxtail barley and quack grass are prevalent across the area.

Photo #:4246  
Observer: GWM  
Date:7/13/2023  
Direction Photo is Taken: North  
Notes: View of a rock pit in which rocks from the agriculture field have been piled in this location to facilitate agricultural production in the rest of the crop field.

# Appendix B

## Plant List

USACE Region: Great Plain			
Genus	Species	Common Name	Wetland Indicator Status
<i>Alisma</i>	<i>triviale</i>	Northern water plantain	OBL
<i>Amaranthus</i>	<i>retroflexus</i>	Red root	FACU
<i>Bassia</i>	<i>scoparia</i>	Mexican fireweed	FACU
<i>Bromus</i>	<i>inermis</i>	Smooth brome	UPL
<i>Chenopodium</i>	<i>album</i>	Lamb's quarter	FACU
<i>Cirsium</i>	<i>arvense</i>	Canada thistle	FACU
<i>Echinochloa</i>	<i>crus-galli</i>	Barnyard grass	FAC
<i>Eleocharis</i>	<i>palustris</i>	Common spikerush	OBL
<i>Elymus</i>	<i>repens</i>	Quackgrass	FACU
<i>Epilobium</i>	<i>ciliatum</i>	Fringed willowherb	FACW
<i>Glycine</i>	<i>max</i>	Soybean	UPL
<i>Hordeum</i>	<i>jubatum</i>	Foxtail barley	FACW
<i>Linum</i>	<i>spp.</i>	Flax	NI
<i>Malva</i>	<i>neglecta</i>	Common mallow	NI
<i>Persicaria</i>	<i>pensylvanica</i>	Pennsylvania smartweed	FACW
<i>Persicaria</i>	<i>virginiana</i>	Jumpseed	FAC
<i>Phalaris</i>	<i>arundinacea</i>	Reed canary grass	FACW
<i>Poa</i>	<i>pratensis</i>	Kentucky bluegrass	FACU
<i>Rumex</i>	<i>crispus</i>	Curly dock	FAC

## USACE Wetland Data Sheets

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Stanley Municipal Airport City/County: Mountrail County Sampling Date: 2023-07-13

Applicant/Owner: Stanley Municipal Airport State: North Dakota Sampling Point: 1

Investigator(s): GM, HW Section, Township, Range: sec 29 T156N R091W

Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 0-2

Subregion (LRR): LRR F, MLRA 53B Lat: 48.302800 Long: -102.398802 Datum: WGS84

Soil Map Unit Name: Hamerly-Tonka complex, 0 to 3 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No

Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Hydric Soil Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks:

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No

Remarks:

Hamerly-Wyard soils. Fenceline is 2 feet higher than surface elevation of swale and ponds water in some wet years evidently. No hydric soils indicators present.

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes \_\_\_\_\_ No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes \_\_\_\_\_ No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes \_\_\_\_\_ No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Swale is blocked to the east by a fenceline. ponded water in 2023.

 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
 Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes  No

Remarks:

**SOIL**

Sampling Point: 56

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0-7	10YR 2/2	100					Loam	
7-14	10YR 3/2	100					Loam	
14-30	10YR 3/2	100					Clay loam	

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Remarks:

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes \_\_\_\_\_ No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes \_\_\_\_\_ No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes \_\_\_\_\_ No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes \_\_\_\_\_ No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
